

ARC-65: PMC = PCI Mezzanine Interface Board

The PCI mezzanine card (PMC) provides most of the same functionality of the ARC64 PCI interface board, but follows has a different footprint and set of connector. It can be used with VME-based CPUs in real-time control and image processing systems as a mezzanine board. It can be used in systems that provide either +3.3 or +5 volt power. There is no DB-26 pin connector on the front panel of the ARC-64 has been removed.
